NIM : 181240000850

NAMA : Novi Alfiani

#### 1. Mempersiapkan Bahan-bahan

Sebelum memulai siapkan dulu hal-hal yang dibutuhkan seperti codeigniter, jquery,bootsrap,ignited-datatables,datatables.

#### 2. Membuat Database Dan Table

Disini saya menamai databasenya dengan db\_pwl\_novi, Untuk pembuatan databasenya bisa melaui cmd ataupun phpmyadmin

kemudian buat 2 tabel:

#### -Barang

# -Kategori

### 3. Insert Data ke dalam table

Masukan data dimasing-masing table, tentunya semakin banyak data semakin baik, adapun dalam prosesnya bisa melalui cmd ataupun php my admin

### 4. Instal Codeigniter

Pindahkan folder codeigniter ke dalam htdocs kemudian rename disini saya namai ulang dengan datatable\_pwl

Pada gambar diatas dapat dilihat, bahwa didalam folder assets terdapat folder css, fonts, images, dan js. Didalam folder css, terdapat file bootstrap.css, dataTables.bootstrap.css, dan jquery.datatables.min.css. Didalam folder js, terdapat file bootstrap.js, dataTables.bootstrap.js, jquery-2.1.4.min.js, dan jquery.datatables.min.js. Sedangkan folder fonts dan images merupakan folder bawaan bootstrap.

# 5. Menkonfigurasi Beberapa file

- Buka application/config/autoload.php atur menjadi seperti berikut:

```
60 */
61 $autoload['libraries'] = array('database','session');
62
63 $autoload['helper'] = array('url');
64
```

- Buka application/config/config.php atur menjadi seperti berikut:

- Terakhir Buka application/config/database.php atur menjadi seperti berikut:

6. Copy file database.php dari ignited-datatables kedalam folder application/libraries

- 7. Buat Controller dengan nama crud.php dengan kode sebagai berikut:
  - Bagian Controller
  - Function index(), berfungsi untuk menampilkan sebuah dengan nama crud\_view sekaligus membawa data kategori yang di simpan dalam array.

 Function get\_produk\_json(), berfungsi untuk menampilkan data barang dari hasil join antara tabel barang dan tabel kategori, kemudian di rubah kedalam format JSON (Javascript Object Notation) Object.

```
function get_guest_json() { //data data produk by JSON object
    header('Content-Type: application/json');
    echo $this->crud_model->get_all_produk();
}
```

- Function simpan(), berfungsi untuk menyimpan data kedalam tabel barang dari form.

```
function simpan(){ //function simpan data

function simpan()

function simpan(){ //function simpan data

function simpan()

function simpan()

function simpan()

function simpan data

function
```

- Function update(), berfungsi untuk mengkoreksi / update data barang dari database.

- Function delete(), berfungsi untuk menghapus record (baris) pada table barang dari database.

- 8. Buat Controller dengan nama crud\_view.php dengan kode sebagai berikut:
  - Bagian View
  - Head view

```
Crosmpp/Intdocridatatable_pull-application/viewri.crud_view.php (datatable_pul) - Sublime Text (UNIES/GSTERED)
                                                                                                                                                                                                                                                                                                                                                                               - a x

- Pada view diatas dapat dilihat diantara tag script terdapat baris komentar setup datatables sampai dengan end setup datatables. Kode tersebut berfungsi untuk menampilkan data dari json object dari function get\_produk\_json(), kemudian menampilkannya ke tabel dengan id="mytable".
- 9. Buat Controller dengan nama crud\_model.php dengan kode sebagai berikut:
  - Bagian Model

Pada model Crud\_model terdapat dua function, yaitu function get\_kategori() dan function get\_all\_produk().

- Function get\_kategori(), berfungsi untuk menampilkan data kategori ke dalam selectbox nantinya.
- Function get\_all\_produk(), berfungsi untuk menampilkan data barang yang diambil dari hasil join antara tabel barang dan kategori.

## 10. Tampilan

Silahkan panggil controller crud pada URL seperti url berikut:
 <a href="http://localhost/datatable\_pwl/index.php/crud/">http://localhost/datatable\_pwl/index.php/crud/</a>
